

Moshe Sedero

Technical Project Manager

+972-52-618-0471 | sedero.moshe@gmail.com | [LinkedIn.com/in/moshe-sedero](https://www.linkedin.com/in/moshe-sedero) | moshesedero.vercel.app

Summary

- **Technical Project Manager with 14 years of experience across Automotive R&D and Space domains**, with a proven track record of delivering complex technical projects end-to-end, from PoC to production.
- **Combines deep engineering foundations with hands-on technical experience and strong project management skills.**
- Experienced with Agile methodology and CI/CD workflows in software development environments - collaborated closely with software developers, Product, ML algorithm, DevOps and Cloud teams, external vendors, and global stakeholders at all levels, including senior leadership.
- Strong ownership and sharp interpersonal skills. Holding the full product chain in view - from developer to end user.
- Generative AI hands-on early adopter, accelerating productivity with LLM tools, and staying current with AI landscape.

Skills

Agile, Scrum, CI/CD, Jira, Confluence | Git, Jenkins, Docker, Linux | Python, Bash, JSON, YAML | GitHub, Bitbucket, VS Code, PyCharm | Claude Code, Lovable AI, Google AI Studio, NotebookLM

Professional Experience

Cloud & AI Technical Development | Self-Directed

June 2025 - Present

(See Professional Development section below)

General Motors (GM) - Technical Center Israel

2021 - June 2025

R&D hub for Autonomous Vehicle (AV) and Advanced Driver Assistance System (ADAS) technologies.

Technical Project Manager

2024 - 2025

- **Led the end-to-end implementation from PoC to production** of a simulation-based synthetic-data pipeline.
- **Coordinated with dozens of stakeholders** across engineering, product, program, and vendor; provided clear updates to Director-level leadership, ensured successful execution and alignment with project requirements and timelines.
- **Delivered 5,000+ ML training datasets across 6+ projects and 3 global locations.**
- **Directed cloud migration pilots** across compute clusters, improved user experience and pipeline reliability.
- Transformed AI workflows to scalable self-service products, reduced team dependency and empowered customers. Built training and knowledge resources, led global workshops (20+), and enabled 8 developers to self-serve.

Team Leader SimOps - Simulation Operations

2022 - 2024

- **Led the Simulation Operations team** (SimOps), bridged developers and engineering teams to drive simulation enablement and adoption among internal customers through training, documentation, and customer-facing support.
- **Agile methodology** - Planned Sprints and Milestones, aligned priorities with management, defined DoDs, authored Stories, managed day-to-day activities, mentored and promoted the growth of my team members.
- **Championed tools migration from local desktops to a cloud-hosted Web UI platform**, eliminated key pain points for customers, boosted adoption by engineering teams, and significantly scaled customer productivity.

- **Led release management of simulation packages and platform versions**, created regression and acceptance test plans and authored release notes to ensure smooth, high-quality deployments.

System Validation Engineer

2021

- Collaborated with 50 US-based System Engineers, PMs and TPMs - designed and delivered simulation scenarios.

Israel Aerospace Industries (IAI) - Space Division

2011 - 2021

Systems Engineer & Technical Operations Lead

- Technical owner for geostationary communications satellites; main engineering PoC for suppliers, customers, and cross-functional teams. Led anomaly resolution with data-driven mitigation plans with global specialists.
- Led release management and end-to-end deployment of automation tools: defined requirements, coordinated development, supervised validation, and managed OTA production rollout.
- Led a software acceptance testing team. Prepared Acceptance Test Procedures (ATP), mapped test suites to Software Requirements (SRS). Implemented requirements traceability and defect-tracking workflows.
- Led in-sourcing of core activities from external vendor, establishing independent in-house capability.

Professional Development

Cloud & AI Technical Development | Self-Directed

June 2025 - Present

- Designed AI-assisted development workflows orchestrating Claude, NotebookLM, Gemini, Lovable, and Claude Code.
- **Directed agentic AI development from architecture through implementation**, authored SOPs, application specifications, phased build plans, testing, and version control across multiple personal projects.
- **AWS cloud fundamentals** - conceptual understanding of AWS Well-Architected Framework, networking, compute, containers, databases, and security architecture through structured self-study.

Education

B.Sc. in Aerospace Engineering | **Technion** - Israel Institute of Technology

Languages

English - Full professional proficiency | **Hebrew** - Native
