Moshe Sedero

Technical Project Manager

+972-52-618-0471 | sedero.moshe@gmail.com | LinkedIn.com/in/moshe-sedero

- **Technical Project Manager with 14 years of experience across Automotive R&D and Space domains**, with a proven track record of delivering complex technical projects end-to-end, from PoC to production.
- **Combines deep engineering foundations with hands-on technical experience and strong project management skills.**
- Experienced with Agile methodology and CI/CD workflows in software development environments - collaborated closely with software developers, Product, ML algorithm, DevOps and Cloud teams, external vendors, and global stakeholders at all levels, including senior leadership.
- Strong ownership and sharp interpersonal skills. Holding the full product chain in view - from developer to end user.
- Generative AI Hands-on early adopter, accelerating productivity with LLM tools, and staying current with AI landscape.

Technical Skills:

Project Management: Agile, Scrum, CI/CD, Jira, Confluence

DevOps & Cloud: Git, Jenkins, Docker, Linux

Programming & Scripting: Python, Bash, JSON, YAML

Development Environments & Tools: GitHub, Bitbucket, VS Code, PyCharm

Generative AI & Agentic Tools: Claude Code, Lovable AI, Google AI Studio, NotebookLM

Professional Experience:

Cloud & AI Technical Development | Self-Directed | June 2025 - Present

(See Professional Development section below)

General Motors (GM) - Technical Center Israel | 2021 - June 2025

R&D hub for **Autonomous Vehicle** (AV) and **Advanced Driver Assistance System** (ADAS) technologies.

Technical Project Manager (2024-2025)

- Led the rollout of simulation-based synthetic-data pipeline from Proof-of-Concept (PoC) to production deployment, **delivered 5,000+ ML training datasets across 6+ projects and 3 global locations**.
- Coordinated with dozens of stakeholders across engineering, product, program, and vendor; provided clear updates to Director-level leadership, ensured successful execution and alignment with project requirements and timelines.
- Directed cloud migration pilots across compute clusters, improved user experience and pipeline reliability.
- Transformed AI workflows to scalable self-service products, reduced team dependency and empowered customers. Built training and knowledge resources, led global workshops (20+), and enabled 8 developers to self-serve.

Team Leader SimOps - Simulation Operations (2022-2024)

- **Led the Simulation Operations team** (SimOps), bridged developers and engineering teams to drive simulation enablement and adoption among internal customers through training, documentation, and customer-facing support.
- **Agile methodology** - Planned Sprints and Milestones, aligned priorities with management, defined DoDs, authored Stories, managed day-to-day activities, mentored and promoted the growth of my team members.

- **Championed tools migration from local desktops to a cloud-hosted Web UI platform**, eliminated key pain points for customers, boosted adoption by engineering teams, and significantly scaled customer productivity.
- **Led release management of simulation packages and platform versions**, created regression and acceptance test plans and authored release notes to ensure smooth, high-quality deployments.

System Validation Engineer (2021)

- Collaborated with 50 US-based System Engineers, PMs and TPMs - designed and delivered simulation scenarios.

Israel Aerospace Industries (IAI) - Space division | 2011 - 2021

Systems Engineer & Technical Operations Lead

- Technical owner for geostationary communications satellites; main engineering PoC for suppliers, customers, and cross-functional teams. Led anomaly resolution with data-driven mitigation plans with global specialists.
- Led release management and end-to-end deployment of automation tools: defined requirements, coordinated development, supervised validation, and managed OTA production rollout.
- Led a software acceptance testing team. Prepared Acceptance Test Procedures (ATP), mapped test suites to Software Requirements (SRS). Implemented requirements traceability and defect-tracking workflows.
- Led in-sourcing of core activities from external vendor, establishing independent in-house capability.

Professional Development:

Cloud & AI Technical Development | Self-Directed | June 2025 - Present

- Designed AI-assisted development workflows orchestrating **Claude**, **NotebookLM**, **Gemini**, **Lovable**, and **Claude Code**. Authored SOPs, application specifications, and phased build plans, and directed **agentic AI development** from architecture through implementation, testing, and version control across multiple personal projects.
- AWS cloud fundamentals - conceptual understanding of AWS Well-Architected Framework, networking, compute, containers, databases, and security architecture through structured self-study.
- Configured Google Cloud Platform projects for Gemini API access - including API key management, billing setup, and usage monitoring via GCP dashboards.

Education:

B.Sc. in Aerospace Engineering | **Technion** - Israel Institute of Technology

Languages:

English - Full professional proficiency, Hebrew - Native
