Summary

Engineering leader with 14 years of experience - technical project delivery at General Motors (GM) R&D center, and space systems engineering at Israel Aerospace Industries (IAI).

Leads cross-functional teams in Agile, CI/CD software development environments - working closely with software developers, product, ML, DevOps and cloud teams, customers, external vendors, and global stakeholders at all levels including VP and director-level leadership.

Brings a track record across team leadership, technical project ownership, and large-scale execution: led a simulation operations team; established and delivered a synthetic data pipeline from PoC to production - generating 5,000+ ML training datasets across 6 projects enabling perception teams across 3 global locations.

Skills

Agile, Scrum, CI/CD, Release Management, Jira, Confluence | Git, GitHub, Jenkins, Docker, Linux | Python (working knowledge), Bash, JSON, YAML | VS Code, Claude Code

Professional Experience

Cloud & AI Technical Development | Self-Directed

June 2025 - Present

- **Designing and directing AI-assisted development workflows** - leveraging Claude Code and multiple AI tools across personal projects from architecture to implementation, authoring SOPs, application specifications, and build plans.
- **Expanding technical foundation through AWS cloud fundamentals self-study** - covering Well-Architected Framework, networking, compute, storage, containers, databases, and security architecture.

General Motors (GM) - Technical Center Israel

2021 - June 2025

R&D hub for Autonomous Vehicle (AV) and Advanced Driver Assistance System (ADAS) technologies.

Technical Project Manager

2024 - 2025

- **Owned end-to-end delivery of a simulation-based synthetic data pipeline from PoC to production** - drove requirements, development, testing, and data delivery through to completion.
- **Coordinated across Perception, software development, cloud infrastructure, DevOps, product, and program teams** - from individual developers to Director-level leadership - alongside external simulation software vendor management.
- **Delivered 5,000+ ML training datasets across 6 projects and 3 global locations**, enabling perception model training.
- **Directed infrastructure migration pilots across compute clusters**, improving pipeline reliability and user experience.
- **Transformed simulation workflows into scalable self-service products** - reduced team dependency, built training and knowledge resources, led global workshops (20+), and enabled 8 developers to self-serve.

Simulation Operations Team Leader

2022 - 2024

- **Led a 5-person Simulation Operations team** - bridged simulation developers, infrastructure teams, and internal engineering customers to drive tool adoption through training, documentation, and customer-facing support.
- **Championed migration from local desktop tools to a cloud-hosted platform** - eliminated key pain points, boosted adoption across engineering teams, and significantly scaled simulation capacity.

- **Led release management of simulation packages and platform versions** - defined regression and acceptance test plans, authored release notes, and ensured smooth, high-quality deployments.
- **Served as primary vendor interface** - managed feature requests, bug triage, and roadmap discussions; led make-or-buy evaluations and provided strategic recommendations to leadership.
- **Managed Agile sprints and milestones** - aligned priorities with management, defined DoDs and authored stories.

System Validation Engineer

2021

- Collaborated with 50 US-based System Engineers, PMs and TPMs - designed and delivered simulation scenarios.

Israel Aerospace Industries (IAI) - Space Division

2011 - 2021

On-Orbit Operations & Systems Engineering

- **Served as primary engineering authority for in-orbit geostationary communications satellites** - main PoC for satellite owners, payload customers, hardware manufacturers, and cross-functional teams across multiple geographies.
- **Owned a multi-year high-stakes electrical power system anomaly** - led sustained technical response including deep telemetry analysis, parameter prediction, and preventive action planning; coordinated with VP-level customer stakeholders and international manufacturer specialists.
- **Led development and deployment of a mission-critical automation tool** - defined requirements, coordinated software development, supervised validation, and managed production rollout - ensuring continuous operational coverage during critical satellite periods with zero tolerance for failure.
- **Trained 100+ satellite operators**; mentored junior engineers across the team.

Satellite Orbital Management Lead

- **Led in-sourcing of orbital maneuver planning and analysis from an external Flight Dynamics team** - established independent in-house capability from scratch.
- **Developed a data-driven optimization methodology for orbital maneuver planning** - iteratively ran simulations, executed maneuvers, compared predicted vs. actual results - delivering measurable cost savings to the company.

Software Acceptance Testing Team Leader

- **Led a software acceptance testing team** - authored test procedures, mapped test coverage to software requirements, and implemented requirements traceability and defect-tracking workflows.

Education

B.Sc. in Aerospace Engineering | Technion - Israel Institute of Technology

Languages

English - Full professional proficiency | **Hebrew** - Native
